If it says something like:Exception in thread "main" java.lang.UnsatisfiedLinkError: no foo in java.library.paththen it can't find the foo library (foo.dll) in your PATH or java.library.path. If it says something like:Exception in thread "main" java.lang.UnsatisfiedLinkError: com.example.program.ClassName.foo()Vthen something is wrong with the library itself in the sense that Java is not able to map a native Java function in your application to its actual native counterpart.To start with, I would put some logging around your System.loadLibrary() call to see if that executes properly.If it throws an exception or is not in a code path that is actually executed, then you will always get the latter type of UnsatisfiedLinkError explained above.As a sidenote, most people put their loadLibrary() calls into a static initializer block in the class with the native methods, to ensure that it is always executed exactly once: System.loadLibrary('foo'); Please log in or register to add a comment.
